

PBD

DESCRIPTION:

The PBD panel profile offers the additional strength of an exposed fastener panel and the economy of wider panel widths in the sandwich construction of a composite wall system.

FEATURES:

- Exposed fastener panel
- Sculptured ribs
- Signature® 200 and 300 Series Options
- Continuous eave to sill until panel exceeds 40' in length

BENEFITS:

- Economical application
- Reduces oil canning, and has a textured appearance
- 20 year silicone polyester color warranty
- Attractive with no end laps, and ease of erection
- Premium paint finish with a 25 year warranty, ultimate resistance to color changes and chalk

GAUGE: 24 and 26

LENGTH: 40' maximum recommended length but longer lengths are available on special order.

FASTENERS: Various self drilling depending on application.

FINISH: Galvalume®

USAGE: Composite wall system application.

LIMITATIONS: Not to be used as exterior application.

NOTE: Oil-canning is not considered grounds for rejection of any panel system. Oil-canning can occur in any panel with wide flat sections. Heavier gauge, embossing, striations, flatter sub-frame systems and support from a solid sub-deck can all help to minimize oil-canning.
